

Amendments to the Claims

Claim 1 (Currently amended) A process for manufacturing a glazing, comprising molding an appendage onto a glazing profile provided around at least part of the periphery of a pane of glass, the process further comprising the steps of:

- advancing a mold into sealing contact with a part of the profile onto which the appendage is to be molded, wherein the mold comprises a first mold half and a second mold half
- introducing a predetermined quantity of polymer material into a mold cavity provided in the mold
- allowing the polymer material to bond to the glazing profile, wherein the pane of glass remains outside the mould cavity and wherein the mold does not make contact with the pane of glass.

Claim 2 (Previously presented) A process as claimed in claim 1, wherein the mold is open when the polymer material is introduced into it, the mold being closed after the introduction of the polymer material, and wherein the pane of glass remains outside the mold cavity even when it is closed.

Claim 3 (Previously presented) A process as claimed in claim 1, wherein the polymer material is in a fluid condition when it is introduced into the mold.

Claim 4 (Withdrawn) A process as claimed in claim 1, wherein the polymer material is thermoplastic, and comprises a preformed piece of solid material when it is introduced into the mold.

Claim 5 (Previously presented) A process as claimed in claim 1, wherein the glazing profile is extruded onto the pane of glass, and the physical form of the glazing profile remains unaltered when the appendage is molded onto it.

Claim 6 (Previously presented) A process as claimed in claim 1, wherein the glazing profile comprises a basal portion attached to the pane of glass and a lip which projects from the basal portion, and wherein the appendage is molded onto the lip.

Claim 7 (Previously presented) A process as claimed in claim 6, wherein the appendage forms an extension of the lip.

Claim 8 (Previously presented) A process as claimed in claim 7, wherein the extension of the lip is positioned at a corner of the pane of glass so as to provide the lip with a vertex adjacent the corner.

Claim 9 (Previously presented) A process as claimed in claim 1, wherein the mold comprises a first mold half which makes contact with a first surface of the

glazing profile, said first surface facing away from the pane of glass, and a second mold half which makes contact with a second surface of the glazing profile, said second surface facing towards the pane of glass, wherein the second mold half is maintained at a lower temperature than the first.

Claim 10 (Previously presented) A process as claimed in claim 9, wherein the temperature of the second mold half does not exceed 130°C.

Claim 11 (Cancelled)

Claim 12 (Cancelled)

Claim 13 (Previously presented) A process as claimed in claim 9, wherein the temperature of the second mold half does not exceed 125°C.
